Dear Readers,

The year 2022 has been a challenging year for the global economy. The slowdown globally is now visibly more broad-based and sharper than initially anticipated. As per IMF, global growth is forecast to slow from 6.0% in 2021 to 3.2% in 2022 and 2.7% in 2023. The World Bank too has warned that the global economy is "dangerously close" to a recession. Many countries are now experiencing multi-decadal high inflation numbers. Global inflation is forecast to rise from 4.7% in 2021 to 8.8% this year. The future global economic outlook now depends a lot on the monetary and fiscal policies to be undertaken by the central banks in addition to the trade, energy and even political /diplomatic paths to be pursued by big players. Risks continue to be high amidst the Ukraine war, the appreciating US Dollar, the property market crisis and slowdown in China and the distress in emerging economies. A mature approach and multilateral cooperation would be needed in order to address the uncertainty and risks facing everyone.

Closer home, inflation remains one of the policymakers' primary concerns, with the CPI for September 2022 standing at 7.41%. One has to note that inflation in India, although high, is relatively moderate and much under control compared to many other economies. The monsoons this year stood at 7% above normal for the entire nation but did see deficient and excess rains at the state level which has impacted the sowing season which in turn has started to reflect in the retail food inflation numbers. The Rupee has been depreciating, but again less compared to other currencies against the US Dollar. On many other fronts, India is today a standout story and India's strong economic growth and sound external balance sheet are expected to provide a buffer against the challenging global environment.

India continues to have strong fundamentals, good forex reserves, a resilient supply chain, growing exports, a resurgent demand, rising credit, strong financial markets and a stable political environment. The government expects the economy to grow at 7% this fiscal year while the IMF forecast is for a 6.8% growth with caution in the coming months. As of now, India is the fifth-largest economy in the world and as per IMF, India can potentially be the third largest after US & China by FY28. Backed by a resilient economy and strong leadership, India is now recognised as an important player in global politics and is an important member of many global alliances. India is well poised for growth, not just for the next decade, but perhaps for many decades to come.

HIGHLIGHTS

- NIFTY 50 & S&P BSE SENSEX gained 449 and 1110 points respectively in the second Quarter of the FY 23-24. The quarter belonged to sectors like media (30%+), Metals (13%+), Realty (11%+), Health (11%+) & Tech (10%).
- Global economic trends remain mixed and challenging. Geopolitical challenges in addition to pressures on account of higher interest rates and its impact on growth and returns continue to remain. Domestic market rally has been driven by strong macro fundamentals, robust foreign and domestic flows and healthy earnings growth. While all the major indices are trading near all-time highs, the run up in mid/ smaller capitalization companies has been very sharp. What has worked for mid and small caps is the broad basing of the market earnings and healthy balance sheets.
- Local events like forthcoming state & general elections, global developments like rising crude oil prices, mixed signals on global growth etc appears to be ignored in the current euphoria. Large Caps appear to be better positioned on a relative basis and along with Asset Allocation products like Multi Asset Funds, Balanced Advantage etc may assist to manage the near term risks. Investors apprehensive of the equity market swings can consider participating in a staggered manner in line with their risk appetite and investment goals.

HIGHLIGHTS

- Bond yields rose initially following the RBI's announcement to conduct open market sale of bonds through auctions. High U.S. treasury yields and rising crude oil prices extended the losses. However, losses were reversed and prices increased as market participants went for value buying to take advantage of the recent rise in yields. Fall in domestic retail inflation helped to extend the gain further.
- Reserve Bank of India conducted the auction of three government securities namely 7.17% GS 2030, 7.18% GS 2037 and 7.25% GS 2063 for a notified amount of Rs. 34,000 crore, which was completely accepted. The cut off price/implicit yield at cut-off for 7.17% GS 2030, 7.18% GS 2037 and 7.25% GS 2063 stood at Rs. 98.85/7.3959%, Rs. 97.73/7.4444% and Rs. 96.36/7.5387% respectively

HIGHLIGHTS

- The Indian rupee depreciated by 1.18% to 83.065 per USD, amid risks of capital outflows as markets digested the RBI's latest policy decision. The Indian central bank held its key policy rate unchanged at 6.5% in October, as expected by markets, and signaled that borrowing costs will remain elevated for a prolonged period due to heightened inflationary risks.
- India's foreign exchange reserves stood at **\$586.9 billion** for the week ending September 29, a decline by \$6.30 billion from the week ended June 23. In October 2021, the country's forex kitty had reached an all-time high of \$645 billion. The reserves took a hit as the central bank deployed the kitty to defend the rupee amid pressures caused majorly by global developments since last year.

How To Read Fund Performance Scorecard

Rank: Higher the return, Higher the rank, i.e. scheme with the highest return will have the first rank. If a scheme has higher ranks (Rank 1 or 2) in all the given periods, then that scheme is considered to be a good performing as well as consistent scheme.

Quartile: Performance for the period is differentiated in four quartiles. First quartile represents best performing schemes (top 25% schemes), while last or fourth quartile represents relatively worst performing schemes for the period. **If a scheme remains in first or second quartile for all the given periods, then the performance of the scheme is considered as consistent & above average.** For further filtration, risk ratio should be considered.

Standard Deviation: Standard Deviation is absolute measure of volatility. It suggests the deviation of returns from its mean.

Beta: It is the measure of the volatility of a security or a portfolio as compared to the market as a whole. Beta signifies the risk or volatility relative to the Benchmark Indices. By definition, benchmark index holds Beta of 1. For example - If a fund's Beta is 1.2, it simply means that the fund is 1.2 times more volatile than the benchmark index.

Sharpe Ratio: The Sharpe ratio, also known as Reward to Risk Ratio, measures the risk-adjusted performance. It indicates the excess return per unit of risk associated with the excess return.

To calculate Sharpe ratio, risk free rate is subtracted from portfolio returns and dividing the result by the standard deviation of the portfolio returns. **The higher the Sharpe Ratio, the better the performance.** A negative Sharpe indicates that a rational investor would choose risk-less asset over the risky investment under analysis.

Treynor Ratio: The Treynor ratio, also known as the Reward to Volatility ratio, measures returns earned in excess of that which could have been earned on a risk-less investment per each unit of market risk. To calculate Treynor ratio, risk free rate is subtracted from portfolio returns and dividing the result by the Beta of the portfolio returns. Treynor ratio is a risk-adjusted measure of return based on systematic risk. It is similar to the Sharpe ratio, but the Treynor ratio uses beta as the measurement of volatility whereas Sharpe ratio uses Standard Deviation. **The higher Treynor Ratio score means better the fund.**

Alpha: The excess return of the fund relative to the return of the benchmark index is a fund's alpha. Alpha is the actual return in excess to what was predicted using the CAPM model. Alpha is often considered to represent the value that a portfolio manager adds to or subtracts from a fund's return. **The higher Alpha score means better the fund.**

Diversification - A risk management technique that mixes a wide variety of investments within a portfolio. The rationale behind this technique contends that a portfolio of different kinds of investments will, on average, yield higher returns and pose a lower risk than any individual investment found within the portfolio. Diversification strives to smooth out unsystematic risk events in a portfolio so that the positive performance of some investments will neutralize the negative performance of others. Therefore, the benefits of diversification will hold only if the securities in the portfolio are not perfectly correlated (ideally perfectly negatively correlated).

Risk Adjusted Returns - We should know that how much risk is involved in producing an investment's return. The return generated in excess of risk is known as Risk Adjusted Return and is generally expressed as a number or rating. Risk-adjusted returns are applied to individual securities and investment funds and portfolios. There are five principal risk measures: Alpha, Beta, R-squared, Standard Deviation and the Sharpe ratio. Each risk measure is unique in how it measures risk.
